

ML: Field of study where machines learn w/o being explicitly programmed.

Arthur Samuel (1959)

⇒ Checkers: learn by playing itself
more training ~ better

⇒ ~~lots of data~~

ML: Supervised ← most common

- Unsupervised
- Recommender systems
- Reinforcement Learning

input → output
X → Y

Learn from "right answers"

X	Y	Application
email	spam (T/F)	spam filter
audio	text transcript	speech recog
English	Spanish	translation
ad/ user info	click (T/F)	online advertising
image / radar	position of other cars	self-driving car
image of phone	defect	visual inspection

Regression: House price prediction

Regression \rightarrow predicts 4 \Rightarrow ∞ possible outputs

Classification: Breast Cancer dataset
malignant \times Benign Δ

size	diagnosis
2	0
5	1
1	0
7	1

\times type 1
 Δ type 2

Classification \rightarrow class category \leftarrow small # of outputs

2 or more inputs

Unsupervised

⇒ clustering
in
unlabeled
data

Example google news → articles w/
same keywords

customers

- Other:
- Dimensionality Reduction
Compress data
to fewer #s
 - Anomaly Detection
Find unusual
data points
